

PolynolTM

**Polyphenols - Flavonoids
Proanthocyaninins**

The Antioxidant Powerhouse

What is Polynol

Polynol™ is a natural polyphenol rich sugarcane extract that possesses bioactive properties. Bioactives are molecules or compounds that can enhance or improve overall health and wellness of cells within the body. The novel preparation of Polynol has been shown to have a large concentration of both polyphenols and other antioxidant compounds.

Rich in polyphenols, flavonoids, and proanthocyanidins, which are known to have multiple health benefits.

Polyphenol-rich sugarcane extract may help deter glucose and fructose uptake in intestinal cells and restore insulin production in dysfunctional β -cells.

Preclinical data found that Polynol can dose-dependently inhibit the expression of certain enzymes in skin cells exposed to UV light suggesting photo protective effects.
