

BETA PRIME[®]

Beta-Alanine Protagonist

What is BetaPrime

BetaPrime® is a patented ingredient matrix, originally formulated as a beta-alanine companion, consisting of Jujube (Ziziphus jujuba) seed extract, L-theanine, and Celastrus paniculatus seed extract. Its primary function is to optimize the pharmacodynamic and ergogenic potential and tolerability of beta-alanine.

JUJUBE

Jujube is one of the main active ingredients in BetaPrime® because it is able to help reduce the side effects from beta alanine supplementation (i.e. tingling, flushing, and burning sensations on the face and neck).

CELASTRUS PANICULATUS

Studies have showed the beneficial effects of Celastrus supplementation on cognitive function, mood, working memory, self-reported anxiety, and attention. The neuroprotective and antioxidant properties of Celastrus (via its bioactives) have a wide range of therapeutic applications such as stress support.

L-THEANINE

L-theanine crosses the blood-brain barrier and promotes an increase in alpha brain waves that help increase creativity and improve mood. Like Jujube, L-theanine has a multitude of benefits and is a key ingredient in BetaPrime® in improving overall effectiveness.

+ By enhancing mood and antioxidant capacity, BetaPrime® supports: +

Stress Support

Mood Enhancement

Cognitive Health
